COVER LETTER

To Whom It May Concern

As a UI designer, I spent years cultivating the attention to details.

Being a freelancer or a sole designer in the team of developers I also became interested in the mechanics of usability and user experience.

Learning the importance of pre-processing, UX and planning, gave me the necessary skills to answer all the “why’s” before the first pixels were even made. Learning the basics of front-end has improved my abilities to enter the production phase with the efficient and smooth design-developer relationship.

All of the above was tested in the arena of a fast-paced startup environment, on-the-go prototyping, testing and delivering assets.

I am therefore confident in my candidacy as a designer at your company. I am also eager to grow as a person and as a professional, share the experience with others and add to the greater good of the team, product, and the company.

With best regards,

Denis
